## *City of Billings- Planning*

**Billings area residents spend nearly 30 percent of their income on transportation. This project helped create the framework to begin to establish bicycling and walking as a normal form of transportation, in order to reduce those burdensome expenses.**

The VISTAs identified the bike repair clinics as a means to introduce education, encouragement and cultural changes. By providing children, especially those from low-income families, with safe reliable bikes to ride helps alleviate the burden of high transportation costs. This project is helping shape a culture in Billings where active transportation is the norm and the City Planning Division and School District #2 did and will continue to encourage youth in Billings to utilize active transportation.
