

**City of Billings**  
**Hail Repair at Miscellaneous City Buildings Bid Package**  
**September 2, 2021**

**ADDENDUM #2**

1. In reference to the MET Bus Transfer Station located at 220 N., 25<sup>th</sup> Street there is a line item to “Inspect, Test & Repair as required Solar Panel.” Since the Solar Panels in question are not definitively able to be identified as to which ones to repair, we’d like you to include a cost to ONLY INSPECT SOLAR PANELS. Once the Bid is awarded, we will identify the true repair scope of work and submit a cost to the Insurance Company for Supplemental Payment for the work that is over and above the existing allowance for the work.
2. In reference to the work at the City Hall EIFS repairs, we would expect the damage from the Hail Impacts to be repaired per industry standards and then a manufacturers recommended final finish coat be applied “corner to corner” to the building surfaces affected. At this time there is no provision to move or relocate the power lines to gain better access to the work.

**End of Addendum #2**
